The global Hydrophilic Fiber Dressing market size is predicted to grow from US\$ 1313 million in 2025 to US\$ 2128 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global Hydrophilic Fiber Dressing production reached approximately 253.3 M units, with an average global market price of around 5.3 USD/unit.

Hydrophilic Fiber Dressing, also known as Hydrofiber Dressing, is a sterile, soft wound care medical device mainly composed of sodium carboxymethylcellulose (CMC) fibers, which can quickly absorb wound exudate and form a gel-like substance to maintain a moist wound environment, support autolytic debridement and granulation tissue growth, reduce wound pain and dressing change trauma, and is suitable for acute wounds such as surgical incisions and burns as well as chronic wounds including diabetic foot ulcers and pressure sores, with the advantages of vertical liquid absorption, bacteria locking and no adhesion to the wound bed.

Driven by the global aging population, the increasing prevalence of chronic diseases such as diabetes, the rising demand for home-based wound care and the emphasis on efficient wound management, the demand for Hydrophilic Fiber Dressing shows a steady growth trend, with the Asia-Pacific region becoming a key growth market; business opportunities lie in developing antimicrobial and smart functional variants, expanding the application in veterinary care and sports injury fields, optimizing the cost structure through technological innovation, and exploring emerging markets via cross-border e-commerce and cooperation with medical institutions.
