Hydrophilic interaction chromatography column is a chromatographic separation technology based on hydrophilic interaction force. Its stationary phase is usually a material with hydrophilic properties, such as silica gel, polymer, etc. The mobile phase is aqueous solution or organic solvent. In the chromatographic separation process, hydrophilic interactions play a major role, allowing different components to be separated on the column.

As an important separation technology, the application fields of hydrophilic interaction chromatography columns are constantly expanding. In the future, it may be more widely used in biomedicine, environmental monitoring, food safety and other fields.
