Hydrophilic Lubricious Coatings are specialized surface treatments designed to reduce friction and enhance lubrication when in contact with water or bodily fluids. These coatings are typically composed of hydrophilic polymers that attract and absorb moisture, forming a smooth, slippery layer on the surface. This lubricious property significantly improves the maneuverability and comfort of medical devices, such as catheters and guidewires, during insertion and navigation through the body. Additionally, hydrophilic coatings can enhance biocompatibility and reduce tissue irritation or damage, making them essential in a variety of medical applications where low friction and high moisture interaction are critical.
