Polyvinylidene fluoride (PVDF) comes in both hydrophobic and hydrophilic forms of filtration membranes, offering broad chemical compatibility. The hydrophilic membranes have significantly lower protein adsorption compared to nitrocellulose, nylon, and PTFE membranes, making them suitable for sterilizing filtration of protein solutions, tissue culture media, antibiotics, and ethanol, as well as for particle removal filtration and biological testing (such as receptor binding studies, TCA precipitation). Hydrophobic membranes are suitable for organic solvents and air filtration. Even at very low differential pressure, they ensure the unobstructed passage of moist air or other gases, while aqueous solutions cannot pass through.

The global Hydrophilic Polyvinylidene Fluoride (PVDF) Membrane market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
