Hydrophobic carbon paper is a type of carbon material with hydrophobic properties. Its surface can cause water molecules to roll like beads, which has good self-cleaning and anti pollution properties. Hydrophobic carbon paper is usually prepared by special treatment of materials such as carbon fiber and carbon black. During the preparation process, surface treatment and coating methods are used to form a micro nano scale structure on the surface of carbon paper, thereby improving its surface hydrophobicity. Hydrophobic carbon paper has high specific surface area and conductivity, and can be applied in fields such as electrochemical catalysis, pollutant adsorption, and biosensors.
