The global Hydroxy Dicarboxylic Acid market size is predicted to grow from US\$ 712 million in 2025 to US\$ 1077 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Hydroxy dicarboxylic acids are organic compounds containing two carboxyl groups (-COOH) and at least one hydroxyl group (-OH) within the same molecule, giving them both acidic and reactive alcohol functionality; typical examples include malic acid, tartaric acid, and citric acid-derived intermediates. The supply chain starts upstream with raw materials such as petrochemical intermediates (e.g., maleic anhydride, succinic acid) or bio-based feedstocks (sugars, starch, glycerol) produced via fermentation or biomass processing. In the midstream, these inputs undergo chemical synthesis (hydration, oxidation, hydroxylation) or biotechnological fermentation routes using microorganisms (e.g., *Aspergillus*, bacteria) to produce specific hydroxy dicarboxylic acids, followed by purification, crystallization, and drying. Downstream, these acids are supplied to industries such as biodegradable polymers (polyesters, polyhydroxyalkanoates), food additives (acidulants), pharmaceuticals (chiral intermediates), cosmetics, and specialty chemicals, with distribution handled by chemical companies, distributors, and formulation manufacturers serving end-use sectors globally. In 2025, global Hydroxy Dicarboxylic Acid output was about 420,000 tons with 550,000 tons of capacity, average prices of USD 1,500-4,000 per ton, and gross margins around 23%.
