The global Hydroxyethyl acrylate (HEA) market size is predicted to grow from US\$ 109 million in 2025 to US\$ 138 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

HEA is a hydroxy functional acrylic monomer which can be used in a variety of ways to produce resins that are useful in high performance coating applications. Using typical methods for the polymerization of ethylenically unsaturated monomers, HEA can be used to attach hydroxy groups to an acrylic polymer backbone. The pendant hydroxyl groups can then act as sites for reaction with a variety of cross-linking agents. HEA allows faster curing cycles and/or reduced baking temperatures, compared with hydroxyalkyl methacrylates. Additionally, HEA can be formulated at higher solids in coating applications. It is also a key raw material for acrylic polyols.

The downstream industries of hydroxyethyl acrylate have a wide range of applications, including fiber processing, coating industry, binder, paper processing, rubber industry and other industries. Hydroxy ethyl acrylate copolymer products can be used to treat fibers, which can greatly improve the water resistance, solvent resistance, wrinkle resistance and water resistance of fibers, etc.; used in the manufacture of thermosetting coatings with excellent performance, synthetic rubber, used as lubricant additives, etc.; used for Adhesives, can improve its adhesive strength; used in paper processing, can improve the water resistance and strength of paper. After the epidemic era, the downstream chemical fiber, synthetic rubber, coatings, adhesives, paper and other industries upward boom, bringing the demand for hydroxyethyl acrylate rise. China's synthetic rubber production has long jumped to the world's first. With the continuous growth of China's automobile ownership, tire replacement demand will continue to expand; at the same time, with the arrival of Industry 4.0, the demand for synthetic

rubber-related downstream industries in the civil and industrial sectors is growing steadily, which will lead to the development of hydroxyethyl acrylate market demand.
