The global Hydroxymethyl Polystyrene Resin market size is predicted to grow from US\$ 191 million in 2025 to US\$ 280 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Hydroxymethyl polystyrene (HMPS) is a functionalized resin produced by introducing hydroxymethyl functional groups into the side chains of polystyrene molecules. It combines the rigidity of the styrene skeleton with the reactivity of active hydroxyl groups and is commonly used in electronic chemicals, photoresists, coatings, and polymer modification.

Upstream applications mainly include styrene monomers, formaldehyde/formaldehyde equivalents, and related chemical raw materials; downstream applications are concentrated in semiconductor and display lithography materials, electronic coatings, functional adhesives, polymer modification, and specialty composite materials. In 2025, the global price of hydroxymethyl polystyrene resin will be US\$24,000 per ton, with annual sales of approximately 8,150 tons and a global annual production capacity of approximately 9,000 tons. The industry profit margin is 40%.

Global Market Future Development Trends:

First, semiconductors and displays will drive high-end demand growth. With the development of advanced processes, advanced packaging, and high-resolution displays, the requirements for functionalized resins in terms of molecular design, reactivity, and purity consistency are increasing. HMPS, with its reactive hydroxyl groups and good film-forming properties, is steadily expanding its application in photolithography materials and electronic coatings, with demand growing along with the

upgrading of electronic materials.

Second, products are evolving towards higher purity and customization. Downstream users are paying more attention to metal ions, residual small molecules, and batch consistency, driving the development of HMPS towards high purity, narrow molecular weight distribution, and customized functionalization. Companies are improving their adaptability in high-end electronics and precision coatings through refined synthesis and post-processing control, thereby increasing added value.

Third, regional differentiation and application expansion are occurring simultaneously. Mature markets focus on electronic-grade and high-end applications, while emerging markets are gradually adopting HMPS in functional coatings, adhesives, and polymer modification. Overall, the HMPS market is characterized by ?small size, high technical barriers, and fluctuations with the downstream electronics industry cycle,? with growth coming more from application deepening than simple volume increases.
