The sanitary diaphragm metering pump is a range-adjustable electric pump widely used in the field of industrial automation. It controls the pressure between the working chamber and the pump casing through an elastic diaphragm, realizing switching between the positive and negative characteristics of the inlet and outlet media, thereby achieving the purpose of quantitatively transporting fluid media.

Sanitary diaphragm metering pumps have the characteristics of simple structure, small size, easy maintenance, and adjustable delivery flow. They are suitable for transporting various fluids, including high viscosity, high temperature and high pressure conditions. This kind of pump usually consists of driving device, reducer, eccentric mechanism, liquid chamber, elastic diaphragm and other main components. Among them, the elastic diaphragm is the core component, which can be manufactured using appropriate materials according to parameters such as medium type, temperature, pressure, acidity and alkalinity to ensure the quality and safety of the transported medium.
