Hygienic Manual Valves are high-standard valves commonly used in industries such as food, beverage, dairy, pharmaceuticals, and cosmetics for manual control or switching of media. These valves are made of stainless steel with sanitary-grade seals to ensure that all contact parts are easy to clean and sterilize (CIP/SIP). Hygienic manual valves are characterized by their simple structure, ease of operation, and excellent sealing performance. They are designed for controlling liquid flow, direction, or on/off functions, making them ideal for production processes that do not require automated control. Common types include manual butterfly valves, manual ball valves, and manual stop valves, widely used in processes requiring strict contamination control.
