Sanitary single seated valves are a type of globe valves used to shut off or change the direction of fluid flow in high-pressure applications.

Sanitary single-seat valve, also known as sanitary single-seat valve, is a kind of valve equipment used in food, pharmaceutical, cosmetic and other hygienic fields. They are designed to meet stringent hygiene requirements to ensure product quality and safety during production. These valves are commonly used to control the flow of fluids (liquid or gas) in piping systems. Sanitary single-seat valves are usually made of corrosion-resistant materials such as 316L stainless steel to ensure that the surface of the valve is smooth, easy to clean, and will not pollute the fluid.
