Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Hyperthermia Systems market.

Hyperthermia is a therapeutic method for the treatment of cancer cells and tumors. The therapy involves heating of tumor up to 42°C, along with the standard therapy named as, chemotherapy or radiation therapy. Hyperthermia systems are used for the treatment of tumors, resisting the follow on medical procedures or when the tumor gets relapsed. Hyperthermia systems heat the tumor through focused electromagnetic (EM) waves without damaging the neighboring tissues. Hyperthermia increases the sensitivity of tumor cells to chemotherapy. The hyperthermia system treatment along with the standard therapies reduce the tumor size and separate out the tumor from the surrounding tissues thus enabling the surgical removal of tumor.
