A Hyperthermic Chemotherapy Machine, also known as a hyperthermic perfusion system or hyperthermic chemotherapy delivery system, is a medical device designed to administer chemotherapy drugs at an elevated temperature directly to a specific area of the body. This treatment approach is used in various medical contexts, including hyperthermic intraperitoneal chemotherapy (HIPEC) and hyperthermic limb perfusion (HILP), to enhance the effectiveness of chemotherapy in treating cancer.

Temperature Control Unit is responsible for heating and maintaining the chemotherapy solution at a precise and elevated temperature. In HIPEC, for example, the temperature is typically maintained in the range of 41-43 degrees Celsius (105-109 degrees Fahrenheit). The controlled hyperthermia is an essential aspect of the treatment's effectiveness. Hyperthermic chemotherapy machines are used in highly specialized medical procedures and are typically operated by trained medical professionals, including surgeons and anesthesia providers.
