The global Hyperthermic Intraperitoneal Chemotherapy Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Hyperthermic intraperitoneal chemotherapy (HIPEC) is a specialized cancer treatment that involves delivering heated chemotherapy directly into the abdominal cavity to treat certain types of advanced or recurrent cancers, particularly those that have spread to the peritoneal (abdominal) lining. HIPEC equipment is a critical component of this procedure, and it consists of various medical devices and instruments designed to perform the treatment effectively and safely.

Maintaining a precise temperature is crucial in HIPEC. The temperature control unit is responsible for heating the chemotherapy solution to the desired temperature, typically around 41-43 degrees Celsius (105-109 degrees Fahrenheit). This controlled hyperthermia enhances the effectiveness of the chemotherapy while minimizing damage to healthy tissues. HIPEC is a complex and highly specialized procedure that requires a skilled surgical team and carefully calibrated equipment to deliver the treatment effectively.
