The global Hypotubes market size is predicted to grow from US\$ 838 million in 2025 to US\$ 1196 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The hypotube is a long metal tube with micro-engineered features along its length. It is a critical component of minimally-invasive catheters, used in conjunction with balloons and stents to open up clogged arteries. The balloon portion of the catheter is attached to the head of the hypotube. The hypotube enters the body and pushes the balloon along a long, distant and complicated journey toward the clogged artery. This journey requires that the hypotube resist kinking without compromising its ability to glide (attributes known as push, track and torque) through the anatomy.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
