The global Hysteroscopic Planing System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The hysteroscopic planing system is a hysteroscopic tissue resection system based on the principle of mechanical rotary cutting. The blade rotates at high speed in the device, with high cutting efficiency, and can perform tissue resection and tissue suction at the same time. Compared with the traditional hysteroscopic resection, it minimizes the secondary damage to the endometrium, shortens the operation time, and has a clear surgical field of view.
