The global IC Carrier Board Ball Mounter market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Ball mount technology uses performed solder spheres dropping through a metal template onto wafer at once. This technology is directly producing bumps on wafer with high throughput and consistent bump results. Ball mounting process without using electroplating decreases cost and chemical pollution.

The AOI equipment for global optical detection of gold wire in the early stage of sealing testing is used to timely detect quality risks in packaging processes such as solid crystal welding lines. In the middle section of the sealing test, a fully automatic IC carrier plate ball planting machine and 3D BALLSCAN equipment are installed to ensure stable mass production of BGA precision ball planting process. Layout an IC fully automatic packaging line in the post testing stage to achieve single product quality traceability and ensure shipment quality.
