## Abstracts

The global IC Chip Laser Marking Machine market size is predicted to grow from US\$ 550 million in 2025 to US\$ 920 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global IC Chip Laser Marking Machine production reached approximately 4,500 units, with an average global market price of around 125,000 USD/unit.

An IC Chip Laser Marking Machine is a specialized automated equipment that uses a focused laser beam to create permanent, high-precision marks (such as serial numbers, data matrices, logos, and codes) on IC chip surfaces or packaging without physical contact, thermal damage, or functional impairment; it integrates laser sources, optical systems, motion control, and vision positioning modules to achieve high-speed, anti-interference, and traceable marking, which is essential for chip traceability, quality control, anti-counterfeiting, and compliance authentication in semiconductor manufacturing and packaging.

Driven by the expansion of the global semiconductor industry, stricter regulatory requirements for product traceability, and the trend of chip miniaturization and high integration, the demand for IC Chip Laser Marking Machines is growing rapidly, especially for high-precision UV lasers and fully automatic integrated machines in advanced packaging and high-end chip manufacturing; business opportunities lie in developing intelligent, high-speed, and low thermal impact equipment, expanding applications in emerging fields such as automotive electronics and AI chips, providing customized solutions for small and medium-sized chip manufacturers, and exploring the potential of combining with digital systems such as MES and AI to improve production efficiency and marking accuracy.
