The global IC Cushion Forklifts market size is predicted to grow from US\$ 11010 million in 2025 to US\$ 13660 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

IC Cushion Forklifts are internal combustion engine-powered forklifts equipped with solid rubber (cushion) tires, designed specifically for smooth, indoor surfaces such as concrete. These forklifts typically run on gasoline, and are commonly used in warehouses, manufacturing plants, and indoor distribution centers where tight turning radii and compact profiles are needed.

The IC Cushion Forklifts Market continues to serve niche indoor applications requiring high power, compact design, and quick refueling. However, environmental regulations and the rising affordability of electric cushion forklifts are gradually reducing its share in advanced markets. Demand is expected to remain resilient in developing regions and rental markets, but overall growth is limited as the industry moves toward full electrification for indoor material handling.

Key Market Trends

Slow Transition to Electric Cushion Forklifts: Many businesses are shifting to electric models due to emissions concerns. **Growth in Emerging Markets:** IC cushion forklifts remain popular in areas with limited charging infrastructure. **Improved Engine Emissions Technology:** Tier 4 and EPA/CARB-compliant propane engines helping prolong market life in regulated markets. **Compact LPG Forklifts** for rental and small warehouse

operations are seeing moderate demand. Rental Demand: High demand in seasonal industries where short-term power and agility are needed indoors.

Market Drivers

Durability for Heavy Indoor Loads: Cushion forklifts are better suited for lifting heavier loads indoors than many electric counterparts. **Lower Initial Costs:** Less expensive than lithium-ion or advanced electric cushion forklifts. **Infrastructure Compatibility:** No reliance on charging stations; refueling is fast and flexible. **Operator Familiarity:** Long-established use in industrial operations.
