IC Drying Cabinet is specialized storage cabinets used in the electronics manufacturing industry to remove moisture from and protect integrated circuits (ICs) and electronic components. These cabinets employ controlled temperature, airflow, and low humidity environments to dry and prevent moisture absorption in delicate components. Moisture can cause electrical failures, corrosion, and reduced performance in ICs. By placing ICs or electronic components in the drying cabinet, moisture is gradually removed through controlled heating and desiccant materials, ensuring their quality and extending their shelf life. IC drying cabinets are often used with moisture barrier bags or packaging materials for added protection during storage and transportation. These cabinets are commonly found in electronics manufacturing facilities, laboratories, and assembly lines to maintain moisture control and preserve the reliability of moisture-sensitive components.
