The global Ice-cream Premix and Stabilizer market size is predicted to grow from US\$ 116 million in 2025 to US\$ 147 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

Ice-cream premix and stabilizer are two important ingredients used in the production of ice cream. Ice-cream premix is a pre-blended mix of various ingredients that are used to make ice cream. It typically contains milk solids, emulsifiers, sweeteners, and flavors. The premix is added to a churner along with additional ingredients, like cream or fruit, to produce ice cream. Stabilizers are substances that help maintain the structure and texture of ice cream. They prevent the formation of ice crystals and maintain the smoothness of the finished product. Stabilizers, such as xanthan gum and carrageenan, are added to ice cream to enhance its shelf life and prevent melting during transportation and storage.

Both ice-cream premix and stabilizers are important in the production of ice cream as they help to maintain its flavor, texture, and consistency. Without them, ice cream may become grainy or icy, and it may not have a long shelf life.
