An ice therapy machine is a device designed to help reduce pain and swelling in the body with an extremely cold liquid. Ice therapy machines use icewater and freezing agents to help with this which in return often helps injuries and pain to heal faster.

The global ice therapy machine market is expected to witness significant growth in the rehabilitation centers and sports centers segment. The number of sports-related injuries such as sprains, ligament tears, and post-workout recovery is increasing, which in turn increases the need for ice therapy machines to be installed in sports centers. Additionally, the ever-increasing number of knee surgeries and low back pain necessitate ice machines to quickly reduce inflammation. For example, the governments of developing countries such as China and India are increasing spending

to expand drugstores and specialty stores. This trend is expected to increase the availability and boost the utility of ice therapy machines for outpatients over the forecast period.
