## Abstracts

Icodec Insulin is a long-acting insulin analog that is widely used in basal insulin therapy for patients with type 1 and type 2 diabetes. Its structure has been modified so that it forms microcrystals after subcutaneous injection, gradually releasing insulin and providing stable blood sugar control for up to 24 hours. This long-acting property reduces the risk of hypoglycemia, especially the incidence of nocturnal hypoglycemia. Icodec Insulin usually only needs to be injected once a day, and its stable efficacy can maintain blood sugar balance throughout the day regardless of when it is injected.

The global Icodec Insulin market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
