ICP-MS stand for Inductively Coupled Plasma Mass Spectroscopy. ICP-MS system is a type of mass spectroscopy which has capability of detecting metal and various non-metals at a concentration as low as one part per quadrillion (PPQ). This is a fast and sensitive method for the multi-element analysis. In this spectroscopy sample are inserted as a solution or via laser ablation to plasma, the temperature of which convert the present element into ions. The ions which have been produced have different charges and mass depending up on the elements from which they are produced. These elements can be separated using ICP-MS system. ICP-MS work as filter allowing only positive ions of a particular mass to pass through detector one at a time. Even though ACP-MS system allows only one particle at a time to pass but it does this at a very fast rate and provide highly efficient results.
