ICP-PECVD coating equipment, full name Inductively Coupled Plasma Enhanced Chemical Vapor Deposition (Inductively Coupled Plasma Enhanced Chemical Vapor Deposition) coating equipment, is an advanced thin film preparation technology. ICP-PECVD combines the advantages of chemical vapor deposition (CVD) and physical vapor deposition (PVD) technologies, using inductively coupled plasma technology to generate high-density plasma. The electrons in these plasmas are heated and excited to produce high-energy and highly active particles, such as ions and free radicals. These highly active particles react chemically with the reaction gas and are deposited as a thin film on the substrate surface. ICP-PECVD coating equipment is particularly suitable for the large-scale production of crystalline silicon solar cells, and is increasingly used in the development of passivation layers for high-efficiency solar cells.

The global ICP-PECVD Coating Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
