Identity Threat Detection and Response (ITDR) software detects identity-related threats and vulnerabilities such as credential misuse and abuse, unapproved authorization and privilege escalation, and other identity-related threats. Information security teams use this software as part of their threat detection program, specifically targeting identity-related attack surfaces. Identity Threat Detection and Response (ITDR) software differs from Identity and Access Management (IAM) software; IAM functions to prevent identity-related risks by providing proper user authentication and access upfront, while ITDR works after a system has been compromised. Identify threats. ITDR also differs from Insider Threat Management (ITM) software in that ITDR identifies credential and privilege abuse, often from external parties who have identified and abused identity vulnerabilities, whereas ITM monitors actions taken by threat actors, such as downloading content they do not have permission to access The data.
