In automobiles, a start-stop system or stop-start system automatically shuts down and restarts the internal combustion engine to reduce the amount of time the engine spends idling, thereby reducing fuel consumption and emissions. Start-stop system need specially developed batteries. The traditional lead-acid 'starter' battery is not suitable for this type of engine and, therefore, cannot be used. Instead, it requires a battery that can deliver the starting power of a traditional automotive battery with the cyclic (charge, discharge, charge etc.)
