The International Electrotechnical Commission (IEC) is an international standards organization dealing with electrical, electronic and related technologies. One of countless items that fall under IEC standardization is the receptacle for power cords on the most diverse electrically powered devices. In order to add value to the power receptacle, EMI filters company upgrades them into highly functional and cost effective filtered power entry modules (PEM), also referred to as IEC inlet filters.

Compliance with EMI/RFI Standards: The increasing need for electronic devices to comply with stringent electromagnetic compatibility (EMC) standards drives the demand for IEC inlet filters. These filters help ensure that electronic equipment meets regulatory requirements for emissions and susceptibility.

Growing Use of Electronic Devices: The proliferation of electronic devices in various industries and applications, including consumer electronics, industrial equipment, medical devices, and telecommunications, increases the demand for IEC inlet filters to manage electromagnetic interference.

Rising Complexity of Electronics: As electronic devices become more sophisticated and densely packed with components, the potential for electromagnetic interference also increases. IEC inlet filters play a crucial role in mitigating interference issues in complex

electronic systems.
