The global IgG Extraction and Purification Reagents market size is predicted to grow from US\$ 158 million in 2025 to US\$ 355 million in 2032; it is expected to grow at a CAGR of 12.4% from 2026 to 2032.

IgG Extraction and Purification Reagents are a class of biochemical reagents used to selectively separate and purify immunoglobulin G (IgG) from serum, cell culture supernatants, or other biological samples. They are typically based on the principle of specific binding of affinity ligands such as Protein A, Protein G, or Protein A/G to the Fc region of IgG, achieving highly selective capture and elution of target antibodies. These reagents can be formulated as resins, magnetic beads, membranes, or kits, enabling the production of high-purity, highly active IgG in a short process. They are widely used in downstream purification stages of antibody preparation, immunoassay, functional studies, and biopharmaceutical development. Sales volume in 2025 was 1.25 million vials, with an average price of US\$115 per vial. Total production capacity was 1.4 million vials, with a gross profit margin of 85%.

United States market for IgG Extraction and Purification Reagents is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
