The global IgG4 Antibody market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

IgG4 Antibody is a subclass of the IgG antibody, one of the major classes of antibodies produced by the immune system. IgG4 antibodies are involved in immune responses by recognizing and neutralizing foreign substances such as bacteria and viruses. This subclass of IgG antibodies is known for its lower affinity for antigens compared to other IgG subclasses, which allows for broader reactivity. IgG4 are commonly used in research and diagnostic applications to study immune responses and detect the presence of certain diseases, including autoimmune diseases and cancer.

The industry trend for IgG4 Antibody has seen a rise due to its importance in immunology research and diagnostics. These antibodies have specific applications in the detection and characterization of certain diseases and conditions. The potential for IgG4 Antibody in targeted therapeutics and precision medicine is expected to drive the industry trend forward. As the field of immunology continues to advance, the use of IgG4 Antibody in research and potential clinical applications is likely to remain strong.
