According to our LPI (LP Information) latest study, the global IGZO X-Ray Detectors market size was valued at US\$ million in 2023. With growing demand in downstream market, the IGZO X-Ray Detectors is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global IGZO X-Ray Detectors market. IGZO X-Ray Detectors are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of IGZO X-Ray Detectors. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the IGZO X-Ray Detectors market.

As CCD obsolescence becomes more prevalent in Healthcare and the dynamic imaging X-Ray market, the need to find alternatives is imminent. There are three flat panel detector technologies in the market, all vying to take CCD's place as the key market alternative. These are Amorphous Silicon (aSi), CMOS, and the newly emerging Indium gallium zinc oxide (IGZO).

At present, flat panel detectors using aSi and CMOS represent the biggest share of the market.

The third alternative on the market are the recent Indium gallium zinc oxide (IGZO) flat panel detectors. Like aSi they also use photodiodes but combine these with IGZO

TFT's instead of aSi TFT's. IGZO TFT's can be made smaller than aSi TFT's and offer significantly improved switching performances. As a consequence, pixels become more sensitive (lower noise), can provide faster readout, and detector panel resolution can be further increased. IGZO panels are also just as available in cost effective and versatile options as the aSi panels with sizes ranging from 6" to 17" for medical applications. Unlike the aSi panels, they can acquire a usable image at equal or lower x-ray dose at faster acquisition speeds and with higher resolution. Performance wise, IGZO detectors are second best to CMOS detectors, but their expected price point – especially in larger detector formats – puts them in a promising position to replace the obsolete II-CCD RIU's.
