IL-2R agonists, namely Interleukin-2 Receptor (IL-2R for short) agonists, are a class of drugs or compounds that can activate IL-2R. IL-2R is a specific receptor for interleukin-2 (IL-2), which is mainly expressed on immune cells such as T lymphocytes, NK cells, and B lymphocytes. As an important immunoregulatory factor, IL-2 has various biological activities such as promoting T cell proliferation, enhancing NK cell activity, and inducing B cell differentiation. However, the activity of IL-2 in vivo is regulated by different subtypes of IL-2R, especially IL-2R ??? trimers and IL-2R ?? dimers respond differently to IL-2. Therefore, designing agonists that can selectively activate specific IL-2R subtypes is of great significance for accurately regulating immune responses.

The global IL-2R Agonist market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.

## IL-2R Agonist market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for IL-2R Agonist and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global IL-2R Agonist.

As the technology gradually matures, the industry has found some methods and approaches to enhance the activation of cytotoxic T lymphocytes (CTLs) by IL-2 while reducing or blocking the activation of regulatory T cells (Tregs). This progression is achieved by enhancing IL-2's affinity for IL-2R ?? dimers while simultaneously weakening its affinity for IL-2R ??? trimers or IL-2R alpha. Overall, the IL-2R agonist market has broad development prospects.
