The global Image Recovery Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Image recovery software is a data recovery software that focuses on recovering lost, accidentally deleted or damaged image files from various storage media (such as hard disks, SD cards, USB flash drives, digital camera memory cards, etc.). Image recovery software supports the recovery of image files deleted directly from storage devices, even if they are moved to the recycle bin or deleted directly from the system. Or it can recover image files from formatted storage devices, which is particularly useful when the storage device is accidentally formatted or formatted by the user. Or it can recover image files lost due to various reasons (such as file system damage, virus attack, etc.) by deep scanning the storage device. With the continuous development of artificial intelligence technology, some image recovery software has begun to integrate AI technology, such as AI old photo restoration, to provide users with smarter and more efficient recovery services.

Image recovery software can be applied to multiple fields, such as business and personal. Among them, individual users have a higher demand for image recovery software, because individual users are more likely to encounter problems such as accidental deletion and formatting of photos in daily use. With the popularity of smart phones and digital cameras, the demand for image recovery software by individual users will further increase. Image recovery technology continues to develop, and new recovery methods and algorithms continue to emerge. For example, traditional image recovery technologies such as deconvolution recovery method, linear algebra recovery method and image blind deconvolution method have been improved and applied, and

new recovery technologies have also been developed. Technological innovation not only improves the success rate and efficiency of image recovery, but also reduces the user's threshold and cost. In the future, the image recovery software market will continue to grow.
