Image photosensitivity additives refer to auxiliary substances added to image photosensitive materials (such as photographic film, photosensitive paper, photoresist, etc.). Their role is to optimize the performance and performance of photosensitive materials to improve image quality and reliability. Image sensitivity additives can have a variety of functions, including: 1. Photosensitivity enhancer: Image sensitivity additives can enhance the sensitivity of photosensitive materials to light and improve photosensitivity efficiency and sensitivity. They can increase the degree of excitation of the sensitizer by absorbing light energy and transferring it to the sensitizer. 2. Contrast enhancer: Image sensitivity additives can improve the contrast of the image and enhance the detail and clarity of the image. They modulate reflections and scattering in photosensitive materials, making the brightness and darkness of an image more

pronounced. 3. Anti-pollution agent: Image photosensitivity additives can reduce pollution and impurities during the preparation and use of photosensitive materials. They can adsorb and neutralize impurities, preventing them from affecting image quality. 4. Anti-fading agent: Image photosensitivity additives can enhance the stability and durability of photosensitive materials and prevent image fading and fading. They inhibit photo-oxidation and chemical reactions, extending the life of your images. 5. Rheology modifier: Image photosensitive additives can change the rheological properties of photosensitive materials and adjust their viscosity and fluidity. They can make photosensitive materials easier to coat and process, improving the efficiency and stability of the preparation process. The selection and use of imaging additives need to take into account the characteristics and application requirements of the photosensitive material. Different types of imaging photosensitive materials may require different additive combinations and formulations to obtain optimal image quality and performance.
