Imidazole buffer refers to a solution containing imidazole, a heterocyclic organic compound, used to maintain a stable pH environment in various biochemical and molecular biology experiments. Imidazole is particularly effective as a buffer in the pH range of approximately 6.0 to 7.5. It acts as a weak base, helping to resist changes in pH when an acid or base is added to the solution.

The demand for imidazole buffer and similar reagents is likely influenced by the ongoing research and development activities in the biopharmaceutical industry. As the industry continues to grow, there may be an increasing need for buffers for various applications, including protein purification.
