The global Immersion Cooling Tank market size is predicted to grow from US\$ 455 million in 2025 to US\$ 1233 million in 2031; it is expected to grow at a CAGR of 18.1% from 2025 to 2031.

An immersion cold tank is a cooling vessel for IT components and other electronic equipment. It is used to prevent coolant and equipment that needs to be cooled.

The Artificial Intelligence (AI) segment is expected to grow at a CAGR of 26.3% over the forecast period. Factors such as the resurgence of a strong research focus on artificial intelligence (AI) in the U.S.; development and mass deployment of deep learning by Facebook, Google, Microsoft, and Amazon; rising demand for AI applications; and Israel's thriving AI ecosystem are contributing toward augmenting the load on AI servers is expected to drive industry growth. These systems are utilized to support large workloads in small and constrained places when a traditional cooling system is either unavailable or impractical. These methods contribute to lower energy consumption in edge deployments. Immersion liquid cooling facilitates deployment at the edge, where high-capacity power sources may not be accessible.
