Immersion liquid cooled direct attach copper cable (DAC) is a type of copper cable used in high-speed data center networks. It is designed to provide high-speed data transfer between switches, servers, and storage devices. The cable is immersed in a cooling liquid, usually a dielectric fluid, to cool the heat generated by the cable and the equipment it connects. This cooling technique allows for higher data transfer rates and increased reliability, as it helps to prevent overheating and data transmission errors. Immersion liquid cooling also allows for more efficient use of space in data centers, as it eliminates the need for traditional air-cooling systems.
