## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The Immersion Liquid Cooling Server is a server immersed in a special liquid. It immerses the entire server in a special liquid with a low boiling point, insulation and non-corrosiveness, and then uses the liquid as a medium to immerse the CPU, memory, and chips in the server. The heat generated by electronic devices such as groups and expansion cards during operation is taken away through the cold and heat exchange engineering design.
