Immersion samplers, also known as immersion probes or dip samplers, are devices used to collect liquid samples from tanks, vessels, bodies of water, or other liquid sources. These samplers are designed to allow the user to immerse the sampler into the liquid to obtain a representative sample for analysis, testing, or monitoring purposes. Immersion samplers are widely used in various industries, including environmental monitoring, water quality assessment, industrial process control, and scientific research.

Manufacturers are focusing on developing immersion samplers made from innovative materials that are both durable and compatible with a wide range of liquids. These materials should resist corrosion, chemical reactions, and contamination.
