Immersion fluorine containing electronic coolant is a special cooling liquid used for heat dissipation and cooling electronic equipment. It is mainly composed of fluorinated compounds, with high thermal conductivity and good heat dissipation effect. The working principle of immersion coolant is to completely immerse electronic devices in the coolant. Through the high thermal conductivity of the coolant, the heat generated by the equipment is quickly transferred to the coolant, and the heat is dissipated through an external heat dissipation system, thereby reducing the temperature of the equipment.
