Abstracts

The global Immune Cell Bank Storage Services market size is predicted to grow from US$ 1018 million in 2025 to US$ 1826 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Immune Cell Bank Storage Services refer to integrated services provided by specialized cell banks, biotechnology companies, and healthcare organizations for the collection, isolation, testing, processing, cryopreservation, quality management, long-term storage, and subsequent retrieval of immune cells. These services are primarily intended to preserve autologous immune cell resources for potential future applications in cell therapy, personalized medicine, clinical research, and health management, providing high-quality biological starting material for possible cell expansion, functional modification, or other advanced therapeutic applications.

The growth of the Immune Cell Bank Storage Services market is primarily driven by the continued development of cell therapy and precision medicine, increasing awareness of personalized health management, and the expanding potential applications of immune cells in clinical medicine. Rapid progress in CAR-T, TCR-T, NK cell therapies, and other immune-cell-based approaches has increased the strategic value of immune cells as biological resources for oncology, immune modulation, and regenerative medicine research, encouraging both individuals and healthcare institutions to place greater emphasis on the long-term preservation of high-quality cell samples. At the same time, population aging, the growing burden of chronic diseases, and rising demand for preventive and personalized healthcare among higher-income consumers are creating additional opportunities for commercial immune cell banking. Advances in cell isolation, controlled-rate freezing, automated cryogenic storage, sample traceability, and digital biobank management are also improving storage safety, standardization, and

operational efficiency. As clinical research in cell therapy expands and regulatory and quality frameworks continue to evolve, demand for professional and standardized immune cell banking and storage services is expected to increase steadily.
