The global Immune Intervention market size is predicted to grow from US\$ 258551 million in 2025 to US\$ 392650 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Immune intervention refers to a medical-grade approach that deliberately activates, suppresses, or modulates immune responses to achieve disease prevention, treatment, and immune function management. In this study, immune intervention is analyzed using the same six-category product classification framework as immunotherapy products, including therapeutic and prophylactic vaccines, cell therapy, antibody therapeutics, antibody-drug conjugates, peptide therapeutics and peptide conjugates, and immunomodulators, with a focus on regulated and commercially scalable medical products. From an industry perspective, immune intervention spans oncology, autoimmune and inflammatory diseases, infectious disease prevention, and selected chronic disease management applications, supported upstream by biopharmaceutical, cell engineering, and peptide manufacturing platforms, and downstream by hospitals, clinical institutions, public health systems, and specialized disease prevention and immune health settings. In terms of profitability, the average gross margin of major global companies' immune intervention-related businesses in 2025 is generally estimated to be in the range of approximately 55%–75%, lower than oncology-focused immunotherapy products but materially higher than traditional small-molecule pharmaceuticals and general healthcare products, reflecting differences in product mix, technical complexity, manufacturing and outsourcing models, and regional pricing dynamics.

United States market for Immune Intervention is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Immune Intervention is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Immune Intervention is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Immune Intervention players cover Johnson & Johnson, Roche, Pfizer, Merck, AbbVie, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
