The global Impact-Extruded Aluminum Component market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Impact-extruded aluminum components are parts or products that are manufactured using the impact-extrusion process with aluminum as the primary material. Impact extrusion is a metalworking process that involves using a punch and die to shape a piece of aluminum into a desired form. This process is commonly used to create parts with a hollow or tubular shape, such as aluminum cans, containers, or automotive components.

Impact-extruded aluminum components are commonly used in the automotive sector for various applications, such as airbag housings, shock absorbers, and structural components. The automotive industry's shift towards lightweighting and fuel efficiency was driving the demand for aluminum components.
