## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The Impermeable Castable has the characteristics of high strength, low thermal conductivity, and strong penetration resistance, which can prevent the penetration, erosion, and clustering of molten aluminum to prolong the service life of the electrolytic cell, and at the same time prevent the electrolyte from entering the refractory insulation layer. The increase of its thermal conductivity leads to an increase in the power consumption of the electrolyzer. The anti-seepage material is quick and convenient to construct, and can heat up quickly without baking. It is mainly used for the bottom of the electrolytic cell to replace the refractory brick layer as the anti-seepage layer.

The global market for Impermeable Castable is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Impermeable Castable market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Impermeable Castable market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Impermeable Castable market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Impermeable Castable market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
