An impingement dryer is a type of industrial drying equipment that usually consists of a chamber in which the material to be dried is placed on a conveyor belt or another moving surface. A high-velocity jet of hot air or gas is directed onto the material surface, creating turbulence and promoting rapid evaporation of moisture. Compared with traditional drying methods, this method improves heat and mass transfer rates, thereby shortening drying time.

The global Impingement Dryer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
