An implant sleeve is a medical device, usually made of metal or plastic material, used in dental implant surgery. An implant sleeve is a sleeve-like device used to secure the position of an implant in the bone tissue of the mouth so that it can fuse and grow successfully. During implant surgery, an implant sleeve is inserted into a pre-drilled hole in the bone tissue of the mouth, and the implant is inserted into the sleeve. Sleeves help implants blend and grow better by providing support and protection. The implant sleeve can also be used to easily install temporary or permanent restorations (such as crowns) after surgery through the internal thread structure
