Implantable biomedical textiles refer to textile-based biomaterials manufactured using techniques such as weaving, knitting, braiding, or nonwoven processing and designed to be implanted inside the human body for medical or therapeutic purposes. These materials are typically made from biocompatible natural or synthetic fibers, including polyester, polypropylene, polytetrafluoroethylene (PTFE), or biodegradable polymers. Implantable biomedical textiles can provide structural support, promote tissue repair, or replace damaged biological functions within the body. Common applications include vascular grafts, hernia repair meshes, artificial ligaments, tissue engineering scaffolds, and cardiovascular or soft tissue repair materials. Due to their flexibility, structural design versatility, and ability to integrate with biological tissues, implantable biomedical textiles play an important role in modern surgery and regenerative medicine.
