The Implantable Sacral Neurostimulation System is a medical technology used to treat chronic pain. It was originally developed to treat sciatica and has since been expanded to treat other types of chronic pain, such as disc degeneration, complex regional pain syndrome, and nerve pain. Root pain etc. As awareness of chronic pain increases and treatment modalities evolve, more and more patients are seeking alternative treatments, and Implantable Sacral Neurostimulation Systems offer a non-pharmacological, adjustable option that can significantly reduce pain, reduce drug use, improve patients' quality of life, and reduce the occurrence of side effects and complications.

The Implantable Sacral Neurostimulation System mainly consists of an electric pulse generator, electrodes, and programmable instrument. The first two are implanted into the patient's body. The electric pulse generator releases electric pulses and transmits them to the electrodes. The electrodes continuously stimulate and excite the sacral nerves. Or inhibit nerve pathways, thereby regulating abnormal sacral nerve reflex arcs, and then improving bladder, sphincter and other functions. The intensity and frequency of electrical stimulation can be adjusted through external or internal devices.
