The global In-Line Balanced Pressure Proportioner (ILBP) market size is predicted to grow from US$ 92.64 million in 2025 to US$ 132 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

The in-line balanced pressure proportioner (ILPB) is a foam proportioning device which is used to balance the higher foam concentrate pressure to the lower system water pressure on pilot pressure regulating systems or foam pump proportioning systems. The ILBP is particularly useful in providing accurate proportioning at multiple riser locations that are situated remotely from the central foam concentrate storage tank. Different sizes of ILBP can be installed on the same foam concentrate supply system to ensure the most appropriate size and demand combination is used. The ILBP is tested and approved to work at different pressure and flow rates and will automatically adjust to give accurate proportioning across its working range.

United States market for In-Line Balanced Pressure Proportioner (ILBP) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
