The In-Place Inclinometer (IPI) is a fixed measurement device used for long-term, continuous monitoring of horizontal displacement within soil or rock masses. Typically installed within a borehole or structure, it senses tilt changes at different depths in real time and calculates cumulative displacement. Composed of multiple tilt sensor units, this fixed-mounted device replaces the probes of traditional mobile inclinometers, enabling automated data collection. It is widely used in the safety monitoring of projects such as slopes, foundation pits, embankments, tunnels, and dams. With its fast response, high accuracy, and strong durability, it is a crucial tool for geological hazard warning and structural health monitoring.In 2024, the global production of in-situ inclinometers (IPI) will reach 144,670 units, with an average selling price of US$1,935 per unit.

United States market for In-Place Inclinometer(IPI) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
